

# WHAT'S THE PLAN?

Easy access to mapped data in the EU

The plan4business team presents a public platform for harmonisation, integration, storing and analysing of spatial and non-spatial data. After one and half years of an intensive development and interaction with stakeholders, the platform offers a series of spatial applications and tools for data harmonisation and publication.

<http://www.whatstheplan.eu/>

The platform contains a **large data pool of planning data** including pan-European datasets Urban Atlas, Corine Land Cover and Natura 2000; statistical information of EUROSTAT and selected countries, national datasets such as cadastral information and flood zones; and regional and local urban planning data. The platform is open for everyone and encourages users to share their data and expand the data coverage on horizontal and vertical levels.

What are the benefits for me as a user? Besides data harmonisation and integration, the platform enables various analyses based on the integrated datasets. The more spatial information is available, the better and more precise analysis results can be retrieved.

The platform targets at different user groups. On the one side, there are **tools for spatial data experts**. The **Integration Engine** enables harmonisation of your urban plans into the INSPIRE Land Use schema and publish them in an interoperable way using the OGC web services. With the **Map Creator** you can prepare a map of your choice by making an overlay of data from the database as well of remote data connected using the OGC web services.

On the other side, the platform contains a set of **spatial apps** which are easy to use and show the capabilities of the platform.

## Location Evaluator

Generate a comprehensive report about a region, a municipality or a point of interest

## Thematic Map Viewer

Navigate through thematic maps and predefined analyses from local to European level

**Browse through these apps and find out what the plan is!**
